<https://www.linkedin.com/in/uche-chimdindu-david> • <https://github.com/acarsondave>

Summary

Backend Engineer with **5+ years** of experience architecting robust APIs, automation pipelines, and multi-LLM SaaS applications. Proven track record as an autonomous builder, successfully delivering **50+ data and automation contracts** that improved client operational efficiency by **over 80%**. Expert in Python and Node.js, bringing a founder's mindset to optimizing asynchronous processing and scalable cloud infrastructure.

Skills

Python • TypeScript • Node.js • Fastapi • PostgreSQL • Redis • MongoDB • Linux

Work Experience

Founder & Lead Engineer

Jan 2024 – present

MiniRec • Full-time

Lagos, Nigeria

- Architected a **scalable**, microservice-based SaaS platform with real-time user onboarding flows, token management, and payment integrations via Stripe and Pystack.
- Designed and deployed an **asynchronous**, AI-driven recommendation engine leveraging multi-LLM support to deliver transparent, accurate, and dynamic results.
- **Created** an agentic student guidance pipeline tailored to user personality, profiling, and institutional data.

Lead Backend Developer & Founder

May 2023 – present

Pingcharm: Rizz Reply • Full-time

Lagos, Nigeria

- Built and managed the backend infrastructure for a bootstrapped mobile application, handling end-to-end technical execution, WebSockets for live features, and server environment scaling.
- Developed custom internal tooling, including an automated script generator utility, optimizing asset creation pipelines.
- **Automated** asynchronous data extraction and content creation workflows natively via Instagram to scale operational growth.

Cybersecurity Trainer

Jan 2025 – May 2025 • 4 mos

Oceangate Tech Academy • Full-time

Lagos, Nigeria

- **Trained and mentored** students in penetration testing utilizing a Linux-first methodology covering system hardening and exploit basics.
- Designed and delivered hands-on laboratory environments utilizing industry-standard assessment tools like Nmap, Metasploit, and Burp Suite.
- **Managed** live Capture The Flag (CTF) competitions and simulated attack scenarios to prepare students for professional certifications.

- Successfully executed over 50 freelance contracts centered on web scraping, data wrangling, and workflow automation.
- Developed custom automation scripts that **improved** operational efficiency for clients, reducing manual data processing labor by over 80%.

Projects

OnlineZip API

Sep 2025 – present

Technologies: Python • Fastapi • Next.js • TypeScript • Docker

- **Launched** a high-performing web service designed to generate ZIP and TAR archives directly from remote URLs.
- Implemented a FastAPI backend utilizing **asynchronous** job queues, webhook notifications, and Cloudflare R2 storage for optimized file streaming.

Auto Bet Prediction and Booking Bot (VFL)

Apr 2023 – present

Technologies: Python • NumPy • Scikit-learn • PostgreSQL • Selenium

- Built a fully **automated** bot that scrapes live data fixtures, aggregates historical match analytics, and auto book outcome predictions.
- Applied statistical modeling techniques, including linear regression, to forecast match goals and win/draw/loss probabilities.

Education

Bachelor's degree: Computer Science

Jan 2019 – Dec 2022 • 3 yrs 11 mos

Ecole Superieure de Gestion et de Technologie

Cotonou, Benin

Languages

English (Native or bilingual proficiency)
