David Uche

Mobile & Product Engineer · Full-stack: TypeScript, React Native, Flutter, Python · LLM features

Lagos, Nigeria (open to remote and relocation) · acarsondev@gmail.com · linkedin.com/in/uche-chimdindu-david · github.com/acarsondave

Shipped: Pingcharm on the App Store: apps.apple.com/us/app/pingcharm-rizz-reply/id6759834337

SUMMARY

Product engineer with 7+ years building software. Founder of ACARSON LLC (US): Pingcharm on the App Store with paying subscribers, MiniRec on the web. Leads mobile at Moneque, a fintech wallet. Owns the work end to end: API, database, app, payments, analytics and release.

EXPERIENCE

Founder & Lead Engineer, ACARSON LLC (US) May 2023 – present

Remote · own products, built and shipped end to end · React Native (Expo), Swift, Flutter, TypeScript

- **Pingcharm**, live on the App Store: AI reply assistant in React Native (Expo) with a custom iOS keyboard extension in Swift that reads the conversation with on-device OCR and writes replies inside any chat app. Its TypeScript API on Cloudflare Workers calls Anthropic, Gemini, Grok or OpenRouter with fallback models.
- **Pingcharm** revenue and release: RevenueCat subscriptions with paying subscribers, Mixpanel funnels from onboarding to paywall to reply generation, Crashlytics; ships every build through TestFlight and App Store review.
- **MiniRec** (minirecc.com): school and course recommendation platform in TypeScript (Next.js, Prisma, PostgreSQL) with Redis queue workers for LLM guidance and email, and Paystack and Stripe subscriptions.
- **Foldbooth** (launching on the App Store): Flutter party camera with a Swift camera plugin and a Cloudflare Workers backend (D1, R2) for shared event albums.

Mobile & Backend Engineer, RealtyConnect (proptech) Sep 2026 – present

Remote · Flutter, Dart · TypeScript on Cloudflare Workers (D1, R2, Queues) · React (Vite)

- Built "smart paste": an LLM turns a messy WhatsApp or WeChat listing into a typed form through a JSON tool schema, merged with a rule parser. On 20 held-out messages, rules alone went from 55% to 80% on the hardest field (estate name); rules plus Claude Haiku 4.5 scored 100%.
- Built the TypeScript REST API and the React (Vite) admin console, including idempotent listing creation that replays a retried request instead of creating a duplicate.
- Load-tested the API with k6 at up to 10 times the planned peak (43,253 requests, no application errors) and fixed, test-first, the two scaling bugs it exposed: alert fan-out and full-catalogue sorts.

Lead Mobile Engineer, Moneque (fintech) Jul 2026 – present

Lagos / remote · Flutter, Dart, Riverpod · TypeScript API on Cloudflare Workers · PostgreSQL

- Lead the iOS and Android app for a Naira wallet: bank transfers, bill payments, virtual dollar cards, crypto and KYC, with each feature split into data, domain, application and presentation layers.
- Integrated the payment and identity providers behind the TypeScript API: Flutterwave (virtual accounts, payouts, card checkout), Korapay and Swervpay (virtual cards, behind a provider switch), VTpass (bills), Quidax (crypto) and Didit (identity documents).
- Built money movement on a double-entry, append-only Postgres ledger with idempotency keys, so a retried transfer or a replayed provider webhook never posts twice; webhook signatures are verified and unmatched events held.

Lead Instructor, Oceangate Tech Academy Jan 2025 – May 2025

Lagos (hybrid) · cybersecurity, AWS cloud

- Taught cybersecurity and AWS cloud classes and ran weekly troubleshooting workshops.
- Ran hands-on ethical hacking labs: students built secure systems, then tried to break them.

Python Developer (Independent), Upwork Nov 2020 – Apr 2023

Remote · Python

- 50+ client projects in Python scripting and automation, including data cleanup.

Earlier: Ethical hacking instructor (2018); self-taught developer since 2014.

Open source: pull request to NousResearch/hermes-agent (Python): threaded iMessage replies in the Photon adapter, with tests.

SKILLS

Backend: TypeScript, Node.js, Python, Cloudflare Workers, PostgreSQL, SQLite (D1), Redis, Prisma, REST API design, k6 load testing

Frontend and apps: React Native (Expo), Flutter, Dart, React (Vite), Next.js, Swift extensions

AI: Anthropic, OpenAI, Gemini and OpenRouter APIs, tool schemas, held-out eval sets, Claude Code, Codex

Product: Mixpanel, RevenueCat, Stripe, Paystack, Flutterwave, App Store and Play releases, GitHub Actions

EDUCATION

B.Sc. Computer Science, University of Lagos, 2019 – 2022
